RECTÁNGULO

# WEBSITE DEVELOPMENT BRIEF

## WORK / PORTFOLIO PAGE - UPDATED

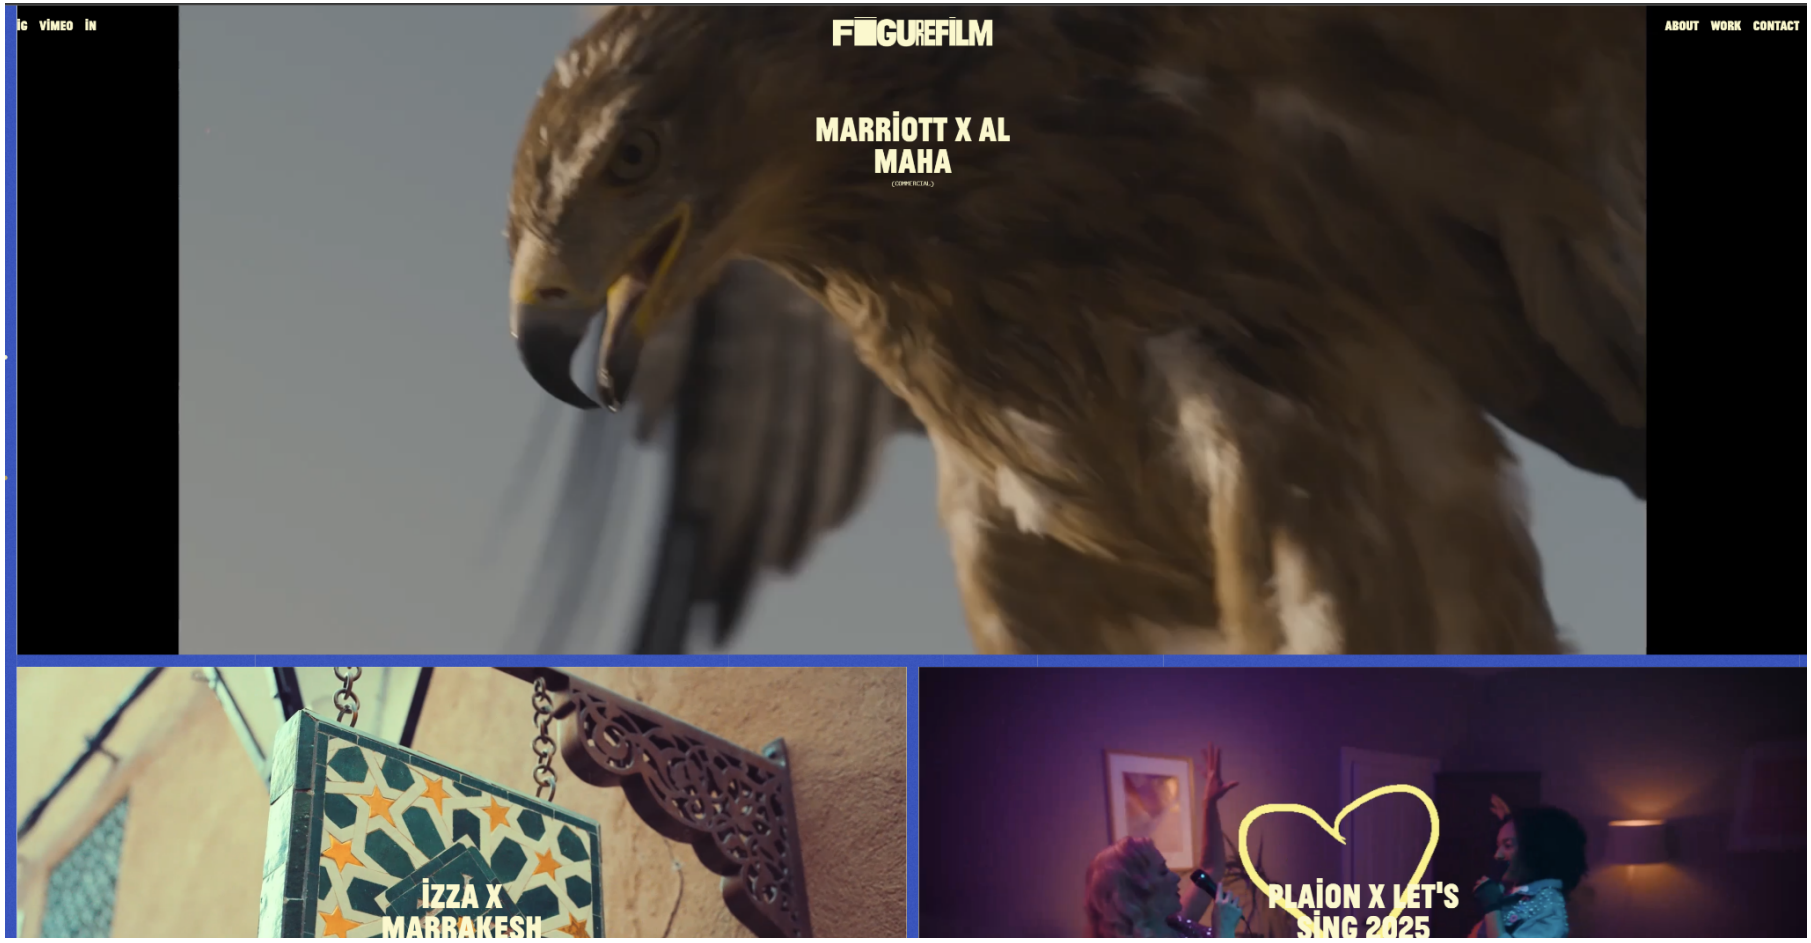

Updated specification including the final project popup layout: fixed information/credits column on the left and full project video on the right.

# 01 - PURPOSE OF THE WORK PAGE

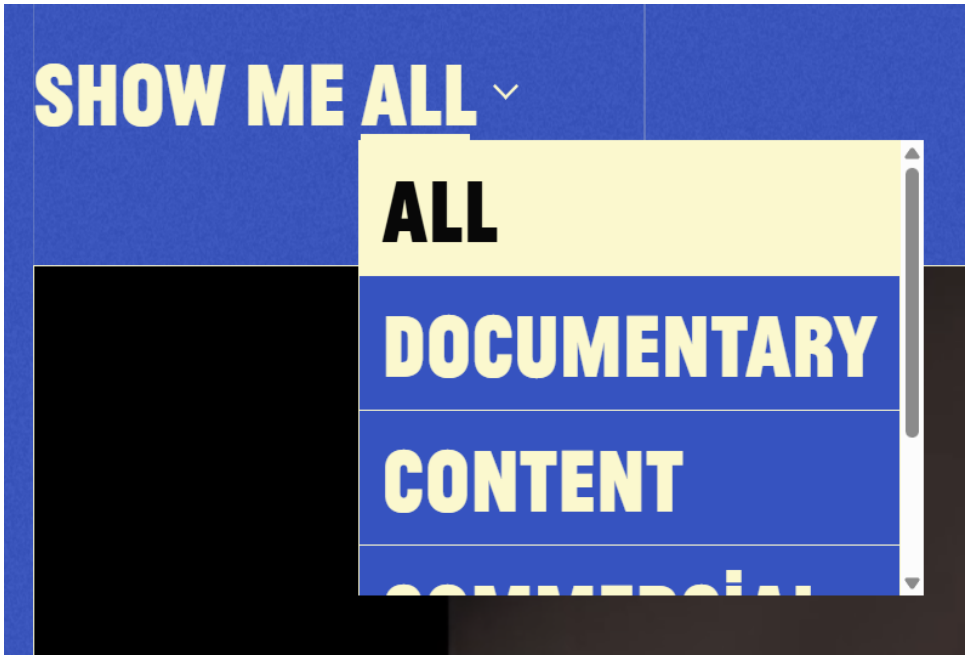

**WORK** is the complete audiovisual archive of Rectángulo. HOME shows a curated selection; WORK provides a broader, filterable collection of completed productions while keeping the experience cinematic and editorial.

The visual system should use the institutional Rectángulo red, subtle grain/noise texture, the same typography/grid language as HOME and SERVICES, and fluid motion tied to scroll.

REFERENCE - Large moving-image project presentation with minimal interface.

# 02 - HORIZONTAL CATEGORY FILTERS

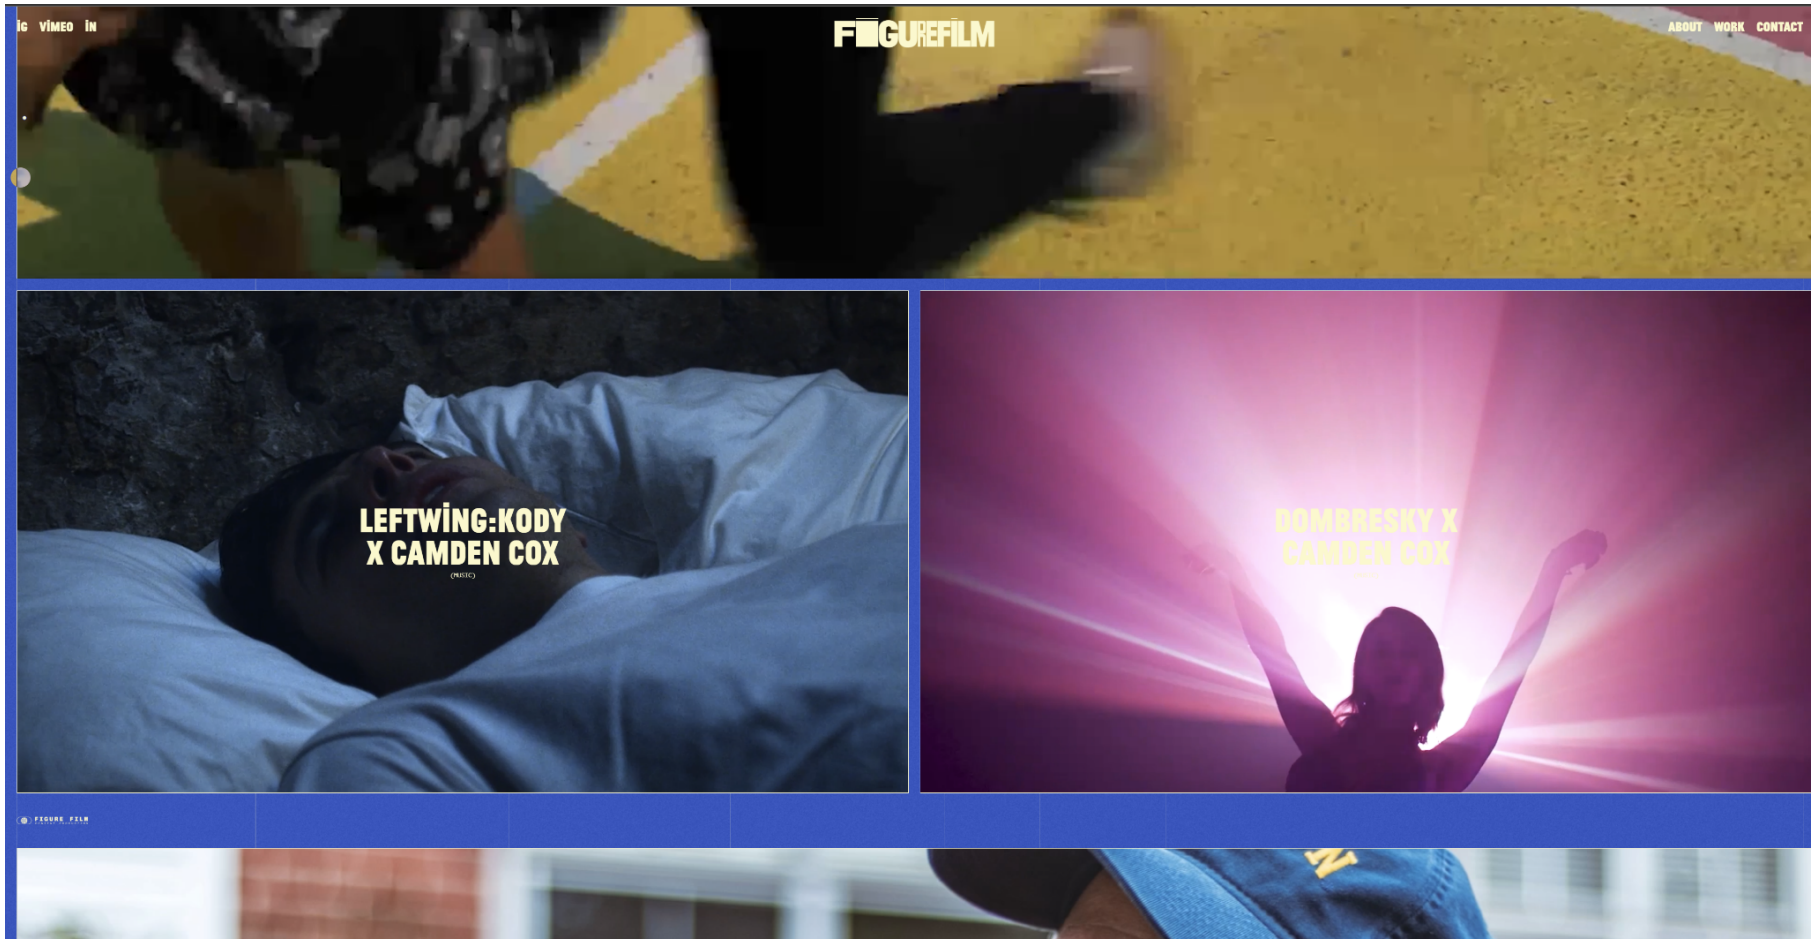

**Direction:** take the visual strength of the reference category selector, but convert it into a horizontal system.

**Suggested filters:**
ALL - COMMERCIAL - BRANDED CONTENT - FILM & NARRATIVE - MUSIC - EVENTS - PHOTOGRAPHY

The active category must be clearly identified. Selecting a category reorganizes the gallery without reloading the page. On mobile, categories can be horizontally swipeable.

# 03 - HORIZONTAL FILMSTRIP / PROJECT GALLERY

When the user reaches the main WORK gallery, the section becomes temporarily **pinned/sticky**. Normal vertical scrolling is translated into horizontal movement from **left to right**, creating the sensation of navigating a filmstrip or audiovisual timeline.

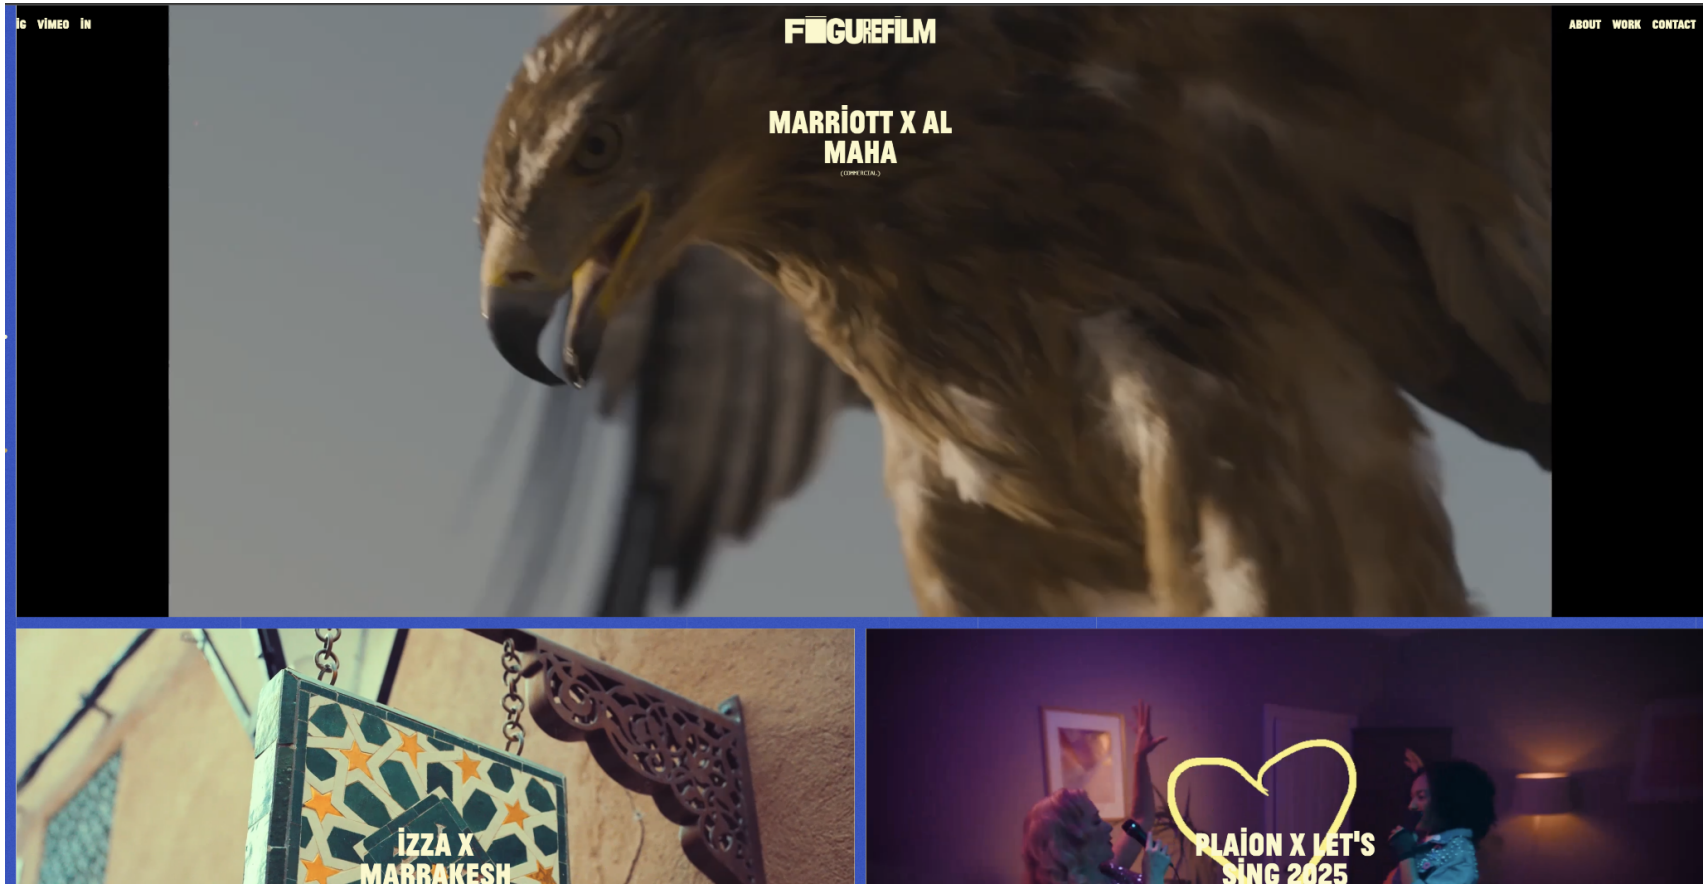

Projects may use different proportions and hierarchy. This is not a literal chronological timeline: the order can be editorial and featured work can occupy more space.

# 04 - AUTOPLAY VIDEO PREVIEWS

Project tiles should primarily use short, web-optimized video loops rather than static thumbnails. A clip starts muted when its tile enters the active viewport and stops when it leaves. Hover can reveal title, category, year or a subtle VIEW PROJECT indicator.

**Performance: off-screen previews must not continue playing. The moving image is the protagonist; interaction effects should remain restrained.**

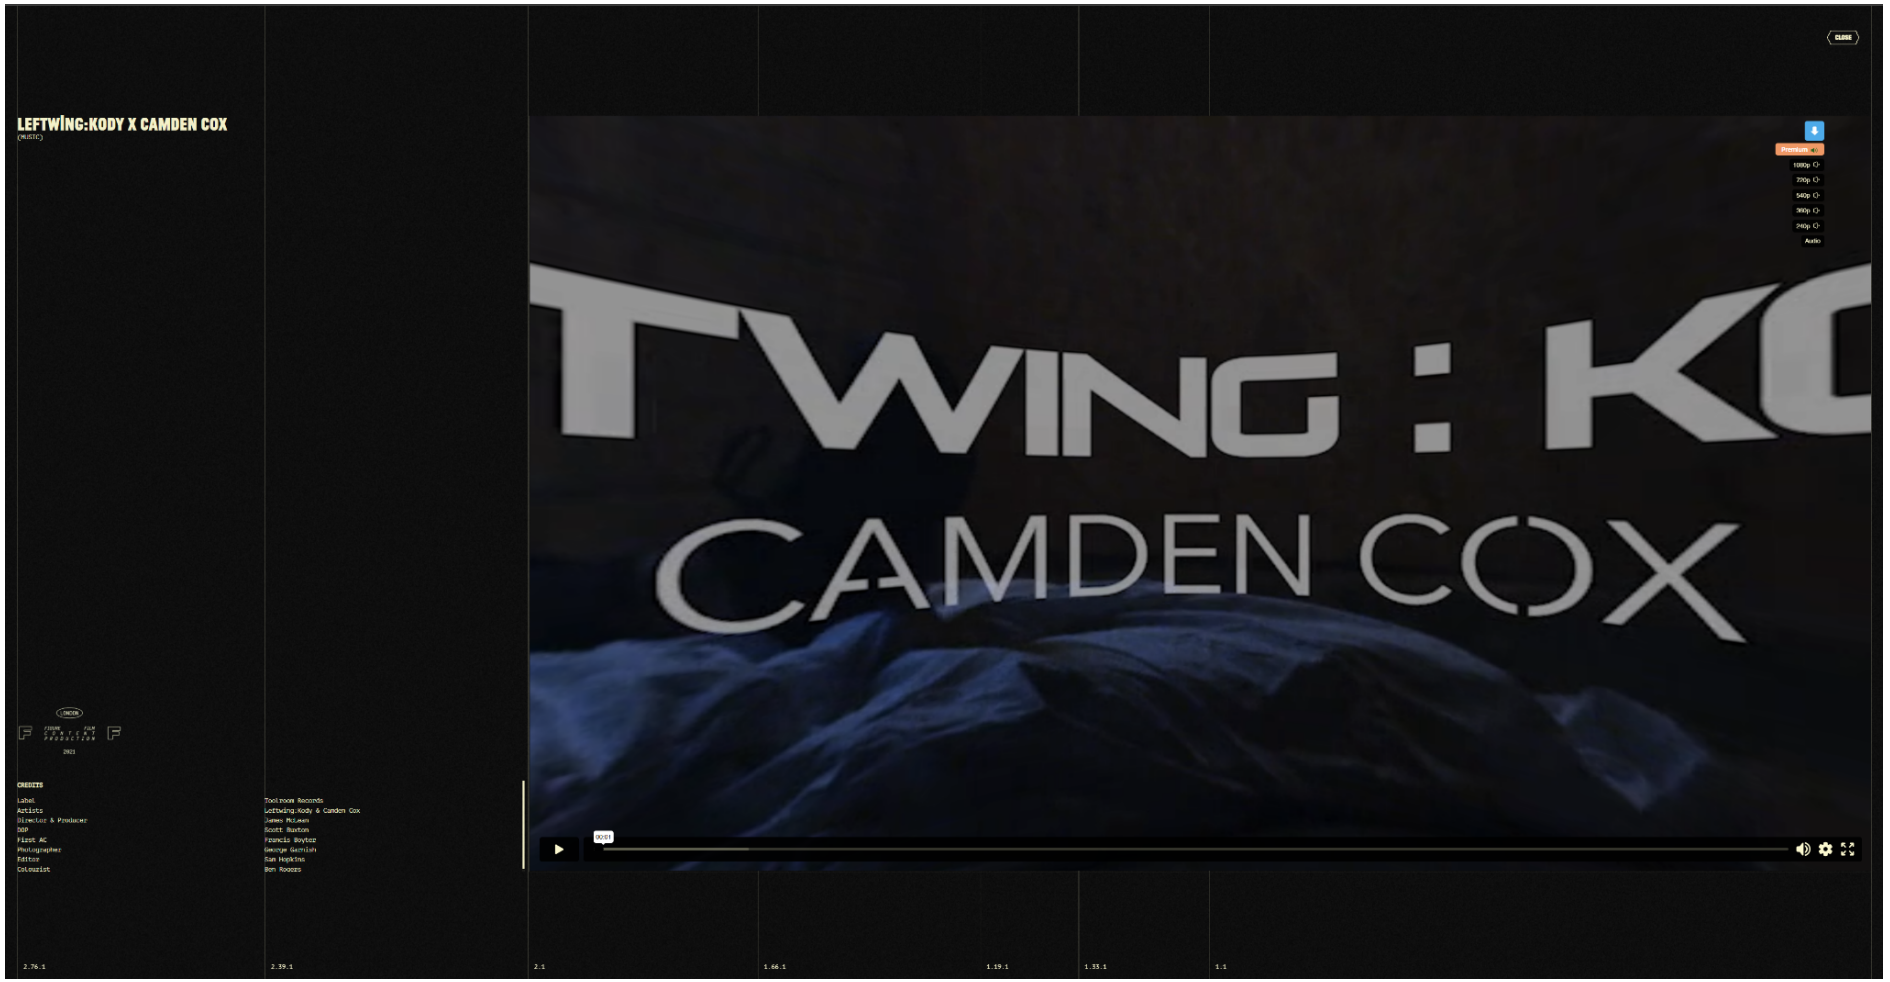

# 05 - INDEX / FILMSTRIP NUMBERING

Each result can carry a simple index such as **01 / 02 / 03...**, plus a compact counter such as **07 / 32**. The numbering reflects the active filtered result set and reinforces the filmstrip/archive feeling.

# 06 - PROJECT VIEWER / FULLSCREEN POPUP - UPDATED

Clicking a project pauses the horizontal archive and opens a fullscreen overlay. The final layout follows the new reference below: **project information and credits remain in a fixed left column, while the complete project video occupies the large right-hand area.**

PRIMARY REFERENCE - Use this distribution for the project popup: information/credits at left, full video at right, CLOSE control at the upper-right.

# 07 - POPUP CONTENT & LAYOUT

**LEFT COLUMN - PROJECT INFORMATION**

**Project title**
Category / type

Optional short description

**CREDITS**
Client
Agency
Artist / Brand
Director
Producer
DOP / Cinematographer
Editor
Colorist
Sound
VFX / Motion Graphics
Production
Post-production
Year
Location

Only fields containing information should be displayed.

**Return behavior: closing the popup must return the visitor to the exact same position in the horizontal WORK archive.**

# 08 - SCROLL LOGIC / INTERACTION FLOW

Desktop interaction sequence:

| | |
|---|---|
| **VERTICAL SCROLL** | **INTRO + FILTERS** |
| ↓ | |
| **PINNED WORK SECTION** | **Vertical input becomes horizontal movement → → →** |
| **CLICK PROJECT** | **Open fullscreen viewer / pause archive** |
| **CLOSE VIEWER** | **Return to same horizontal position** |
| **LAST PROJECT** | **Release pinned section** |
| ↓ | |
| **VERTICAL SCROLL** | **CTA + FOOTER** |

**Mobile:** use natural swipe or an adapted mobile gallery. Do not force desktop scroll-jacking behavior onto touch devices.

# 09 - END OF WORK / CTA

After the final project, horizontal navigation releases and the page returns to normal vertical scrolling. Close with the same collaboration/contact system used throughout the website.
